

Ask the market a question. Get the market's *answer*.

Real estate professionals ask hard questions all day: who is really behind a deal, what a market is actually doing, which fund a manager runs. GREI Agent Access brings the answers into the AI assistant your team already uses, so the intelligence arrives inside the conversation where the work is happening, with the publisher, date and link riding along with every fact.

"Which firm is this, actually?"

One answer per real-world company, manager, investor or fund, with the other names it trades under. No more mistaking a manager for its fund, or one Blackstone entity for another.

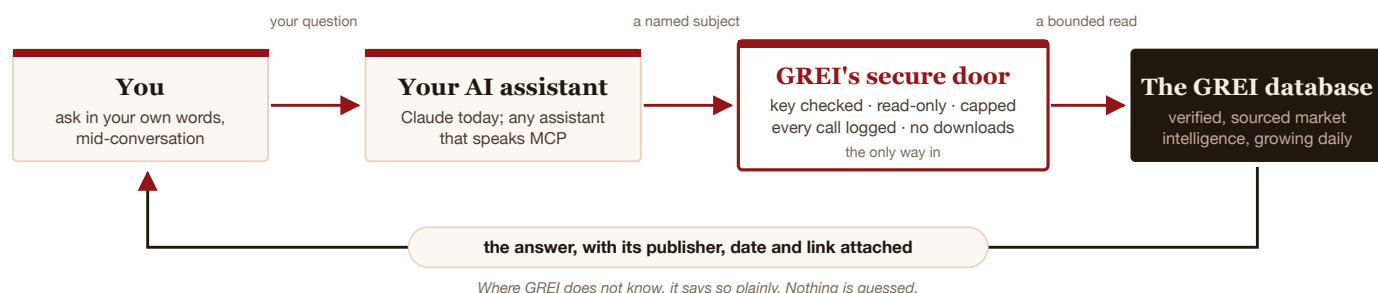

"Who is behind this, and who else do they work with?"

Who manages, owns, finances, advises or transacts with whom, drawn from GREI's relationship intelligence. Each connection shows where it came from and when it was true.

"What are the numbers for this market, and who said so?"

Rents, yields, vacancy, supply and more, by market and sector, each figure with its value, period and the research it was published in.

How an answer travels

Connect once

Add GREI in your assistant's settings, approve with your access key. No code, nothing for IT to run.

Read-only, always

Nothing connected to GREI can change, add or delete a record.

Question-shaped

It answers about the subject you name. It is not a data feed and not a download.

Yours to switch off

One key per organisation. Revoking it disconnects every assistant it approved, instantly.

The mechanism, plainly: GREI Agent Access is a read-only connector using the open Model Context Protocol (MCP), the standard AI assistants such as Claude use to reach external data. It works inside any MCP-compatible assistant. Server address: greintelligence.com/api/mcp.

Included with the **Advanced Intelligence** plan.

Ask us about access for your team.

Global Real Estate Intelligence is the external intelligence platform for global commercial real estate. It discovers, verifies, structures, connects and preserves intelligence about properties, transactions, companies, managers, funds, investors, lenders, people, markets and the relationships between them. Our website is an interface; the accumulated intelligence system underneath it is the company.
